BIOSCIENTIFIC ARE CONSTANTLY SOURCING TOP QUALITY PRODUCTS

– PLEASE ENQUIRE FOR THAT “HARD TO FIND” PRODUCT! –

Discover novel methods for 3D invasion/migration models with VitroGel.

Our powerful xeno-free functional hydrogel system allows scientists to manipulate the ECM composition to explore the effects of mechanical strength, functional ligands, degradation and more on cell mobility.

VLVbio

The M65 EpiRat™ ELISA is based on the M5 and M6 antibodies, which bind to the biomarker Keratin-18 (K18). K18 is an intermediate filament protein in epithelial cells. The concentration of K18 reflects the amount of overall cell death, both apoptosis and necrosis, in K18 positive cells. Levels of K18 are commonly elevated when the liver endures damage, through disease or toxicological effects.
